PROFESSIONAL SUMMARY

Full stack developer at Jimber, where I build features for a SASE security platform in TypeScript (Vue, NestJS, MySQL with Prisma) and wrote about half of its end-to-end test suite. I graduated from EELU in 2025 with a degree in Computers and Information Technology.

WORK EXPERIENCE

Jimber

Full Stack Developer Oct 2025 - Present

Intern Jun 2025 - Sep 2025

Remote | A Belgian security company building a SASE platform.

- Worked in TypeScript across a Vue 3 frontend, a NestJS backend and a MySQL database (Prisma).
- Merged **218 pull requests**, about a quarter of all merged PRs on the platform since June 2025.
- Shipped **about 30% of the tickets** in the most recent product release.
- Wrote about half of the current Playwright end-to-end test suite, covering firewall policies, users and customers, network settings (DHCP, WAN load balancing), web filtering and EDR.
- Built the EDR whitelist feature across the stack (validation, API and UI, plus adding items straight from the monitoring page), the malicious file detection UI, and a redesign of the EDR monitoring page.
- Built the security assessment feature, including monthly scheduling and PDF reports.
- Added CSV export to every monitoring page, streaming large exports in batches and protecting against CSV injection.
- Built a GitHub App on my own (NestJS, GitHub GraphQL API) that updates the team's project board from webhooks: moving issues to In review when a pull request asks for review, sending unassigned issues back to Ready, and grouping notifications into one comment. Deployed it to a cloud VPS with Docker Compose, Traefik (HTTPS) and a CI/CD pipeline.
- Set up a nightly release staging environment, refactored the preprod workflow, and added pull request lint checks (commitlint, YAML lint).

PROJECTS

Snipscribe - AI-Powered Video Summarization Platform

Graduation project

Developed a full-stack web platform that transcribes, summarizes, and translates YouTube videos using state-of-the-art AI models: OpenAI Whisper for transcription and Qwen3 LLM for summarization and translation. Built a NestJS backend and integrated email/in-app notifications to enhance user engagement. Wrote all of the app's code on my own, including a Python worker that runs the AI jobs outside the API. It picks up pending summaries from the database, downloads the audio with pytubefix, transcribes it with Whisper and summarizes it with Qwen3 running locally in Ollama. Implemented key features including bilingual support (English/Arabic), summary history, community sharing, and a responsive React frontend.

NestJS, React, Python, OpenAI Whisper, Qwen3

EDUCATION

Bachelor's degree, Computers and Information Technology The Egyptian E-Learning University (EELU) 2021 - 2025

CERTIFICATIONS

CS50	Harvard	2022
Google IT Automation with Python	Coursera	2022

SKILLS

Frontend: Vue 3, React, TypeScript, JavaScript, HTML/CSS, Tailwind CSS **Backend:** Node.js, NestJS, Python (Flask, Django), PHP

Databases: MySQL, PostgreSQL, Prisma

Tools: Docker, Docker Compose, Traefik, CI/CD (GitHub Actions), Git, GitHub, Playwright, Linux, Bash

AI coding tools: Claude, GitHub Copilot, Codex **Spoken:** Arabic (native), English (full professional)
